This release is available electronically on INN (News Net).

April 17, 1997

### **UM'S COLLEGE OF TECHNOLOGY ANNOUNCES TWO NEW FIELDS OF STUDY MISSOULA --**

The University of Montana—Missoula College of Technology will offer two new Associate of Applied Science degrees.

Beginning in the 1997-98 academic year, students will be able to earn degrees in administrative assisting, a human resources option, and in microcomputing technology, a network support option.

The administrative assisting program prepares students to provide administrative support to managers, administrators and human resource professionals. Graduates will be ready to take on duties including, but not limited to, employee supervision, evaluation, training and development and employee relations. For more information on the administrative assisting program, call Niki Fullerton at (406) 243-7802.

The microcomputing technology program prepares students to identify, plan and install cabling for networks; install network software and client software; diagnose, troubleshoot and maintain communications over and to the network; and setup and maintain Internet sites. To learn more about the microcomputing technology program, call Lynn Stocking at (406) 243-7801.

Each course of study can be completed in four semesters; students entering the microcomputing technology program in the spring will take five semesters to complete the option.
